A SHIFT IN THINKING

The Egans Process

Reuse

“The best form of recycling is reuse.”

Egans manages office furniture and fit out for clients through logistics, storage and asset tracking, allowing businesses to have their office assets at their fingertips when required. We facilitate our clients in dynamically reusing their assets as opposed to the costly and environmentally irresponsible habit of throwing out the old and buying new.

Resale

If our client has no immediate or foreseeable requirement for office furniture or fit out we put those assets to market in an attempt to extend their operational life. Multi-level selling platforms including traditional and online auctions allow for the highest possible financial return as well as providing a large volume option. Our process includes meticulous and transparent reporting for our clients. We don't predict the outcome but we guarantee the process.

Recycle

In circumstances where no interest is shown from the market (including charity) we engage our split-waste recycle approach. This results in maximisation of recycled soft plastics, hard plastics, glass, paper, cardboard, polystyrene, metals etc. We produce a report for our clients showing the percentage breakdown of each of these recyclables and the clients percentage of landfill avoidance.
